The logo consists of the letters 'JAD' in a bold, white, sans-serif font. A thin, light blue diagonal line runs from the top left towards the bottom right, passing behind the letters. A dark grey, textured brushstroke shape is positioned behind the 'JAD' text and extends downwards towards the bottom left of the page.

**PLEASE BRING THIS CATALOGUE
WITH YOU TO THE SALE**

DISCLAIMER: The descriptions of the animals in this catalogue, including their pedigree and other genetic information, has not been verified by the Vendors or the Selling Agents. Whilst all care is applied in producing this catalogue, industry experience suggests that up to 4-5% of DNA parent verification tests may have errors. Consequently, the Vendors and the Selling Agents and their representative(s) do not assume any responsibility whatsoever for the correctness, use or interpretation of the information on animals included in this sale catalogue. Prospective purchasers should satisfy themselves by inspection or otherwise as to the accuracy of the particulars.

THIRD JAD SPECKLE PARK + ANGUS QLD BULL SALE

BRED FOR LASTING PERFORMANCE

Our family welcomes you to the Third JAD Speckle Park & Angus QLD Bull Sale. Thank you very much for showing an interest in our program – we are grateful for your support, and look forward to getting to know you and your breeding program.

It feels like yesterday that we took the leap of faith and trucked our JAD bulls north for our inaugural Queensland bull sale, and here we are about to host our third! How time flies! We are so excited to be heading back to Rolleston again. It was so rewarding to share our beef - and our program - with such a great group of people at our first two JAD QLD Sales, and we would like to thank everyone who has made our family and team feel so welcome. Thank you!

We hold a growing concern that our beef industry is losing sight of the role of the breeding cow, and the requirements for on-farm profitability of grassroots producers. While we 100% agree that we need to produce high quality beef for the end consumer, and growth is an important trait for profitability through the supply chain, we cannot forget the fundamentals in beef breeding. As we approach the 12th JAD sale to date, we have always been about **breeding for longevity** - encompassing fertility - to ensure commercial relevance for us and our clients. Our breeding cows must rebreed every year, and last the test of time. Once these fundamentals are taken care of, we can focus on layering on performance - enough to suit our environment, target market, and our management. We first started breeding Speckle Park commercially in 2012 and were so impressed by how the breed performed that we decided to start our stud in 2016. We then decided to benchmark this emerging breed against the most popular breed in southern Australia - Angus - by establishing our JAD Angus stud in 2020. We trust you will peruse this

catalogue and see the consistency of type we are developing here at JAD. Our use of a select few performance-recorded sires is really starting to pay dividends, as is our commitment to collecting raw data to increase accuracy of our animals' estimated

breeding values (EBVs), and thus confidence. We have embraced independent assessment of our animals, inching forward each year as measured not just by the percentage of animals that 'make the grade', but more importantly the percentage that sit right at the top of the tree. JAD Speckle Park is one of very few studs that carry a five-star Breedplan Completeness of Performance rating. We apply this same standard in our Angus stud. Although we put a lot of emphasis on doing our best by Breedplan, our core fundamental benchmarks are with the utmost importance placed on temperament, feet and legs, scrotal, and udder quality.

We would like to thank our families, friends, and service providers for their immeasurable support - especially Justin's parents, Tony and Kate. We would also like to thank our team member, Stewart McKenzie, for his valued contribution to JAD.

With thanks,

Justin, Amy, Jack and Mitchell Dickens.

Program:

- Inspections: From 10am
- Sale: 1pm
- Morning tea, lunch and post-sale refreshments will be available.

Selling Agent:

The sale will be conducted as a live auction by Nutrien Ag Solutions. All animals will be available for pre-sale inspection on the day of the sale, and will be sold through a sale ring.

Dane Pearce:	(0439) 917 428
Trent McKinlay:	(0429) 004 737
Daniel Ford:	(0436) 806 825

All lots will be sold under the Australian Livestock & Property Agents Association Ltd Standard Stud Stock Auction Terms and Conditions of Sale. If unfamiliar with these terms, please contact Nutrien Ag Solutions. Please check with the Selling Agents to obtain a buyer's number and registration slip, if you are considering bidding in the sale. Successful purchasers are requested to give written advice to the Selling Agents, regarding transport arrangements, at the sale's conclusion.

Outside Agents:

A rebate of **2%** is offered to outside agents who introduce buyers to the selling agent in writing at least 24 hours prior to the sale, and settle accounts on the purchaser's behalf within 7 days of the sale. A **5%** rebate is offered to outside agents who complete the above AND attend the sale in person with their client(s).

Client Rebates:

A rebate of **5%** is offered to clients who have purchased at a previous JAD Sale, who introduce buyers to the selling agent in writing at least 24 hours prior to the sale, and settle accounts on the purchaser's behalf within 7 days of the sale.

Supplementary Information:

A Supplementary Sheet will be available on sale day, including current scan data, weights, and any withdrawals.

Insurance:

Purchasers are strongly encouraged to immediately insure their new acquisition(s). Stud cattle are a valuable and vulnerable piece of farm equipment.

Unable to Attend the Sale?

Bid online via AuctionsPlus.

The sale will be interfaced as a sequential auction on AuctionsPlus, with live video and audio streamed for online bidders and viewers. There will also be individual videos of each live lot posted to the AuctionsPlus catalogue in the weeks leading up to the sale. Please also register as an AuctionsPlus user at least 24 hours prior to the sale in order to bid. Note that transport arrangements must be organised on sale day.

Phone Bidding: If you would prefer to place your bids over the phone, please contact one of the Nutrien Ag Solutions agents at least 24 hours prior to the sale to make arrangements.

GST:

All animals are sold exclusive of Goods and Services Tax (GST). ie: If a bull is sold for \$5000, you will be charged \$5500.

Mobile Reception:

Mobile phone reception will be stabilised at the sale venue through external boosters. For phone bidding, please contact a Nutrien Ag Solutions agent.

Feeding and Management:

Our 2024/25-drop of cattle were weaned at approximately 5-7 months old. They received weaner pellets as part of the weaning process and were grown out on improved pasture. They have been prepared for the sale grazing on an oats crop only. We aim to have our bulls grow out at between 1-1.3kg/day.

The cattle are now in peak health, with rumens in great balance to handle whatever pasture conditions they encounter at their new home. The cattle have been handled with dogs, UTVs, motorcycles, and on foot. None of the cattle have ever had their feet trimmed in any way. We will NEVER hoof trim our cattle to mask faults. Never ever.

Herd Health:

Some animals in the catalogue have minor pinkeye scarring, not deemed detrimental to their functionality. We strongly recommend annual animal health booster shots.

ALL BULLS:

- ▶ DNA tested to verify they are not persistently infected (PI test) with Pestivirus
- ▶ Vaccinated with chilled Trivalent (3 germ) tick fever vaccine on 26/3/2026
- ▶ Vaccinated for 3-day sickness with Ultravac BEF vaccine on 3/7/2026 and 18/8/2026
- ▶ Pestigard booster given 26/3/2026
- ▶ 7-in-1 booster given 26/3/2026
- ▶ Double vaccinated with Vibrovax (booster given 18/8/2026)
- ▶ Backlined with Stampede on 3/7/2026
- ▶ Cobalife VB12 vaccine on 26/3/2026
- ▶ Dectomax injectable drench to be given on 18/8/2026.
- ▶ Under the Johnes Beef Assurance Score (J-BAS) system, JAD Speckle Park carries a J-BAS 6.

The JAD Guarantee:

Every bull is guaranteed to be a breeder at the time of sale and is guaranteed fertile for **12 months** from sale day. If a bull should prove infertile or unable to serve cows naturally, the vendor will either:

- 1) Provide a satisfactory replacement, or
- 2) Provide a cash refund equal to the purchase value of the bull less salvage value. No credits provided.

It is the purchaser's responsibility to provide a certificate from a registered veterinarian before the 12 months is up to verify infertility, and that it was not the result of an illness, injury, or misadventure. The guarantee covers the purchase value of the bull, without interest, costs and damages. We recommend that all purchasers discuss injury insurance of their purchases at the sale with the on-site representatives or their agent. This guarantee is in addition to the normal terms and conditions governing auction sales.

Livestock Freight:

Formal possession, risk and expenses pass to the buyer at the fall of the hammer. JAD Speckle Park & Angus and/or agent, Nutrien Ag Solutions, can assist with arranging transport. Macdeb Livestock Transport will be present at the sale and can deliver bulls in the days after the sale, at the purchaser's expense. Please liaise directly with Mac Jones to book.

- ▶ **Macdeb Livestock Transport.** Contact Mac Jones at (0408) 572 507.

Semen Rights:

JAD Speckle Park & Angus reserves the right to collect up to 200 straws of semen from any bull in the sale, for within herd use only. Any semen collection will be at our cost and the purchaser's convenience.

Breedplan/TACE:

We are proud of our commitment to the collection and reporting of performance data for BREEDPLAN/TACE. By submitting raw data to the system, we are ultimately improving the accuracy of resultant EBVs to deliver real value to our clients to assist in their decision-making. JAD Speckle Park has a five-star Breedplan Completeness of Performance rating. Speckle Park Single-Step BREEDPLAN EBVs reported in this catalogue come from the July 2026 run, while Angus EBVs and published from the July 2026 TACE run. See further information about BREEDPLAN EBVs on pages 11 and 12, and a Percentiles Table on page 15. For TACE information and Percentiles Table, see pages 56-59.

Veterinarian's Physical Examination of Bulls/Females:

Bulls:

All bulls offered have passed a crushside **and morphology** semen evaluation, carried out by Dr Hennie Strydom of Wellington Veterinary Hospital. This assessment certifies the bulls are fit for natural service, however does not guarantee their semen will freeze for artificial breeding. Additionally, no bulls have been health tested for export qualification purposes. All bulls are sold without guarantee that they will meet all health testing requirements for semen export.

Raw Data:

Fat and muscle scanning, and scrotal circumferences were measured on two-year-old November 19-20, 2025, by Roger Evans, Bovine Scanning Services Pty Ltd, Tamworth, when the animals were 13-16 months old, and on June 11, 2026, for the yearling bulls. This data was submitted to Breedplan/TACE for purebred bulls.

DNA Testing:

All bulls have been fully DNA tested at Neogen Australasia.

100K SNP Profile for every bull and purebred female

Parent Verification (PV) for every bull and purebred female in the sale

Coat Colour	RGF – homozygous dominant black RGC – dominant black/recessive red RGW – wildtype red gene carrier
Poll/Horn Testing	PcPc – homozygous polled HPc – carries one copy of the horn gene
Myostatin	NC – non-carrier of the nt821 myostatin gene C – carrier of one copy of the nt821 myostatin gene
Leptin	Represented as TT, CT or CC. Read the following page for more information about Leptin.

Leptin Testing:

JAD Speckle Park was the first Australasian Speckle Park stud to undertake DNA testing specifically for economically-important beef production traits, including leptin. All purebred lots have their Leptin test results published.

Leptin TT is the preferred genotype - TT cattle will show improved carcase traits over CC cattle, with CT cattle being somewhere in the middle. Cattle inherit one copy of the gene from their dam, and one copy from their sire. This means that if you have a TT bull, the calves can only be either CT or TT, as he only passes down one T allele. Leptin is a mammalian hormone with the primary function of decreasing appetite - it is known as the 'appetite gene'. Leptin TTs have an overall increased rate of fat accumulation compared to leptin CC. For Leptin TTs, this mainly results in:

- ▶ Increased weaning weight
- ▶ Increased cow productive life due to increased body condition
- ▶ Increased milk production
- ▶ Increased 12th rib backfat
- ▶ Impacts yield grade and marbling.

Registration Transfers with Breed Societies

JAD Speckle Park & Angus will take care of and pay for ownership transfers of registered lots on behalf of the purchaser. If you would like your new bull(s) transferred in the database, please email us at jad@jadspecklepark.com.au

Visitor Safety:

All of the sale animals have been screened for temperament and are quiet to handle under normal circumstances. However, there are inherent risks with cattle handling.

VISITORS ENTER THE CATTLE PENS AT THEIR OWN RISK. CHILDREN/PRAMS MUST NOT ENTER THE PENS.

People entering the yards are at risk of injury. Be especially alert to bulls fighting. We do not expect the bulls to be aggressive with humans, but sale day places extraordinary

pressure on them as they experience an entirely foreign environment. Do not crowd the bulls or loiter inside the pens.

When You Get Your New Animal(s) Home

On arrival at their new home it is important a suitable mob of animals (eg: pregnant cows, steers) is yarded to greet the new animal(s), to minimise stress on them. The bulls are in good joining condition at point of sale, but it is imperative to ensure good nutrition for the bull during the joining period. You should check the bulls regularly to see they are working, especially in the first three weeks of joining when the majority of problems occur. Watch for any signs of injury, infection (any high temperature can compromise bull semen quality) or possible serving dysfunction. Early detection of any problems can minimise the impact of the quality of service your bull provides, and conception rates.

Thank You, Thank You, Thank You:

Sales like this one don't just happen - they take a whole team effort, and we are so grateful to those who have assisted us:

- ▶ First and foremost, thank you to Justin's parents, Tony and Kate Dickens, for everything they do for us
- ▶ Our highly valued team member, Stewart McKenzie. Thanks Stew for all your efforts throughout the year
- ▶ Jeff and Alex York for their tremendous support in helping us to get this sale up and running at the Rolleston Livestock & Grain Selling Complex
- ▶ Dane Pearce, Trent McKinlay, and the whole team at Nutrien Ag Solutions. Thank you for all of your efforts!
- ▶ Mac and Barney Jones of Macdeb Livestock Transport for transporting our bulls so professionally
- ▶ Our long-time friend, Paul Keating (Keato), who has helped at every JAD sale, and loves a good Speckle Park steak! This is our 12th JAD Sale to date, and Keato has helped at every one of them - thanks a million!
- ▶ Beef consultant, Dick Whale, Independent Breeding & Marketing Services (IBMS).

SPECKLE PARK COLOUR PATTERN GUIDE

It is important to understand how Speckle Park colour patterns work in order to achieve your breeding goals. While some breeders are mostly interested in producing speckled cattle, others want to inject the notorious hybrid vigour of Speckle Park, while retaining predominantly black herds. For example, when a solid black Speckle Park bull is joined with 100% purebred Angus cows, the resulting calves will be solid black. Another example is when Angus cows are joined to a white Speckle Park bull, the resulting calves will be predominately speckled.

Speckle Park cattle have four distinct colour patterns; speckled, leopard, white pointed and solid black. The speckle and leopard colour pattern are genetically the same except for varying degrees of spotting. Some Speckle Park cattle can produce red colour patterns if both parents carry the recessive red gene.

Please remember when dealing with nature individual results will vary.

The guide is just that – a guide – and Mother Nature has the final say.

GOING FURTHER[®]

THE JAD ADVANTAGE

We are a commercial- and customer-focused Speckle Park and Angus breeding operation which aims to deliver seedstock that will improve the long-term efficiency and profitability of the beef industry, and consistently “plate up” a unique and memorable beef eating experience for the end consumer.

We feel strongly that the Speckle Park and Angus breed in Australia will benefit from bulls that have been bred under our strict standards, and they are backed by our 12-month “JAD Guarantee” – we are in this journey together.

When you buy a JAD Speckle Park or Angus, you can be assured that they have been heavily measured and scrutinised. Our Speckle Park stud carries a five-star BREEDPLAN Completeness of Performance rating,

acknowledging the effort we make to measurement and maintaining contemporary group completeness right through to 15-17 months old, in an effort to achieve more accurate EBVs. We aim for a balanced set of objectively measured traits, and work to gradually optimise growth and carcass traits – not in quantum leaps. We put in the hard work to give our clients the confidence to back us and our cattle.

We are passionate about our cattle and hold a strong female-focussed vision for what we want our herd to look like. Our cattle must be structurally sound, medium-framed, deep-barrelled, thick, and soft with good temperaments, longevity, and a low maintenance requirement. The result is progeny that will calve easily, grow, finish quickly, and grade highly.

We look forward to working in partnership with you.

A GLOBAL INFLUENCE

We travel to Canada and New Zealand regularly to get to know the different breeders and their breeding programs, to see genetic lines in the flesh, and to select our “picks” to infuse into our herd through extensive ET and AI programs.

INDEPENDENTLY ASSESSED

All bulls are semen tested - not just crushside, but also morphology semen testing. All bulls have been independently assessed for structural soundness and temperament.

DATA RECORDED

JAD Speckle Park carries a five-star BREEDPLAN Completeness of Performance rating. Our extra effort is to improve the accuracy of resultant EBVs and deliver real value to our clients to assist them in their decision-making.

TEAMWORK + CUSTOMER SERVICE

We are both just as passionate about our cattle as each other, and we are committed to helping our clients achieve their goals in a long-lasting partnership.

Guide

Structural Soundness Traits

Feet	Evaluation of the shape and evenness of the front and rear feet, with 5 being ideal. Scores greater than 5 exhibit some scissor claw in feet. Scores less than 5 are open clawed.
Pastern Angle	Evaluation of strength of pastern, depth of heel and length of foot, with five ideal. Scores greater than 5 tend towards having shallow heel, less than 5 towards being stubbed toe.
Side View	Evaluation of the angle measured at the front of the hock. Scores greater than five indicate towards sickle hocked, less than 5 indicate the animals towards being straight (post-legged).

Descriptive Traits

Stature	Evaluation of bulls for maturity pattern and frame size. A stature score of 25 is average. This score may be influenced by age of dam, nutrition etc. Scores greater than 25 indicate larger frame, later maturing cattle.
Capacity	Evaluation combines depth of rib, spring of rib and width of chest floor. Scores greater than 25 indicate a bull with larger capacity.
Body Length	Evaluation of body length from point of shoulder to pin bone. Scores greater than 25 indicate longer body length.
Muscle Score	Is the muscularity of the bull devoid of subcutaneous fat. Higher scores indicate animals with higher yield attributes. Scores 25 = C muscle 30 = C+ 35 = B40 = B 45 = B+
Doability	The ability of a bull to deposit fat in fat depots, relative to their peers under a common management regime.

STATURE

Evaluation of an animals frame size, based on visual assessment of the animals hip height.

Score	0	5	10	15	20	25	30	35	40	45	50
Frame score equiv.				3	4	5	6	7	8		

CAPACITY

Evaluation of an animal by visual assessment combining depth of fore rib along with spring of rib and width of chest floor as well as depth of flank.

Score	0	5	10	15	20	25	30	35	40	45	50
-------	---	---	----	----	----	----	----	----	----	----	----

The greater the score, the greater an animals capacity.

BODY LENGTH

Evaluation by visual assessment of an animals length from withers to pins.

Score	0	5	10	15	20	25	30	35	40	45	50
-------	---	---	----	----	----	----	----	----	----	----	----

The greater the score, the greater the body length.

FRONT FEET

Scoring Range	Description
1 - 9	1 - open divergent; 5 - good; 9 - extreme scissor claw
1 - 9	1 - open divergent; 5 - good; 9 - extreme scissor claw

Reference: Shape (primarily curl) and evenness of the claw set.

BACK FEET

Reference: Angle measured at the front of the hock.

SIDE VIEW

Front Feet Angle	1 - 9	1 - steep (stubbed toe); 5 - good; 9 - shallow heel
Rear Feet Angle	1 - 9	1 - steep (stubbed toe); 5 - good; 9 - shallow heel

Reference: Strength of pastern, depth of heel and length of foot.

PASTERN ANGLE

MUSCLING

Evaluation by visual assessment of an animals combined width of rump and hindquarter, with secondary consideration given to forearm muscling.

Score	0	5	10	15	20	25	30	35	40	45	50
Equivalent Muscle			D	D+	C-	C	C+	B-	B	B+	

SHEATH

Evaluating the tightness of the sheath of the bull.

Score	1	2	3	4	5
-------	---	---	---	---	---

Pendulous & loose

Good & tight

DOCILITY

Score	1	2	3	4	5
	Very Quiet	Quiet	Slightly Edgy	Running Away and Rather Not Be In Your Presence	Mad, Will Charge

COAT TYPE

Score	1	2	3	4	5
	Very Short	Fairly Short	Fairly Long	Long	Hairy

Structural problems and temperament in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and overall industry productivity. Dick Whale assesses our sale cattle at least twice in their life before sale day. Having our cattle independently assessed assists us to make unbiased decisions around culling for structure and temperament.

DICK'S PICK

Dick's Pick – Dick's top 5 bulls, based on his independent assessment, have been identified in this sale catalogue. Keep an eye out for this icon to see Dick's Picks!

BREAKING DOWN BREEDPLAN

Estimated Breeding Values (EBVs) published for registered Speckle Park bulls in this catalogue are from the July 2026 SINGLE-STEP BREEDPLAN run. Below is a description for each EBV and how to apply the information:

EBV FOR BIRTH WEIGHT (BWT)

Birth weight is a major factor in calving difficulty. Use EBVs to select against birth weight if dystocia is a problem. The lower the EBV the lighter the calves are expected to be.

EBVS FOR 200-DAY GROWTH AND MILK

Vealer producers should place emphasis on the 200-day growth and milk genes. If the bull is to be used as a terminal sire, growth is most important. If a bull is to be used to breed replacement heifers, and superior milking and mothering ability is required, then consider the milk genes with the EBV for milk (kg). The estimate in kg milk is not the yield of milk of the dam, but the growth of the calf due to more milk and better mothering of the dam. At JAD Speckle Park, we submit two 200-day weights for improved accuracy of this EBV.

EBV FOR 400-DAY WEIGHT

400-day weight EBVs are a measure of the animal's ability to grow to 400-days-of age (can be measured from 301-500 days). It should be used by producers who wish to turn off yearling cattle. At JAD Speckle Park, we submit two 400-day weights for improved accuracy of this EBV.

EBV FOR 600-DAY WEIGHT

600-day EBVs are computed for growth to 600-days-of-age (can be measured at 501-900 days). It is the best prediction

of an animal's ability to grow onto maturity, hence it is important for the heavy steer producer.

CARCASE TRAITS

These traits are calculated from live scan data and are adjusted to a standard steer carcase weight of 300kg.

FAT DEPTH EBV (RIB AND RUMP)

Measured in millimetres at either 12/13 rib or P8 sites. As these EBVs increase, the progeny can be expected to fatten more easily but carcase yield may decline.

RETAIL BEEF YIELD (RBY%)

The percentage of retail cuts compared to total carcase weight. Related to EMA and Fat Depth and Weight EBVs.

INTRA MUSCULAR FAT (IMF%)

The percentage of fat to muscle in the eye muscle. Used as a more precise measure than Marbling Score.

EYE MUSCLE AREA (EMA)

EBVs are relative to the breed average EBV each trait. A larger EMA EBV (sq.cm.) means more muscling and generally higher carcase yield relative to carcase weight.

SPECKLE PARK SINGLE-STEP BREEDPLAN

Speckle Park Single-Step BREEDPLAN uses pedigree, performance and genomic information simultaneously. The analysis takes account of each animal's actual genetic relationship with all other genotyped animals, including those in the reference population. The EBVs in all herds relate to a common base. This increases the accuracy of the data, as well as allowing comparison of the genetic merit of the animals from different herds (across herd) within the group.

Each reported trait shows an EBV and its Accuracy level. The EBV (Estimated Breeding Value) provides the best current estimate of the bull's true genetic merit for that trait, relative to the overall base for the Speckle Park breed. It indicates how his progeny should perform relative to those of other bulls in the breed.

The Accuracy indicates how well an EBV predicts the true genetic worth of an animal. The Accuracy of an EBV will be higher for traits with a higher heritability and will increase as more performance information on an animal and its relatives becomes available. The Accuracy of an EBV is reported as a percentage. EBVs with high accuracy will change less than EBVs of low Accuracy when more performance records are analysed.

The following guide may be useful for interpreting Accuracy:

- **Less than 50% Accuracy** - the EBVs are preliminary. EBVs in this range will have been calculated based on very little information. These EBVs could change substantially as more direct performance information becomes available on the animal
- **50-74% Accuracy** - the EBVs are of medium Accuracy. EBVs in this range will usually have been calculated based on the animal's own performance and some limited pedigree information
- **75-90% Accuracy** - the EBVs are of medium-high Accuracy. EBVs in this range will usually have been calculated based on the animal's own performance coupled with the performance for a small number of the animal's progeny.
- **More than 90% Accuracy** - the EBVs are a high Accuracy estimate of the animal's true breeding value. It is unlikely that EBVs will change considerably with addition of more progeny data.

SPECKLE PARK SELECTION INDEXES

There were four selection indexes introduced for the Speckle Park breed in mid-2023: domestic maternal, domestic terminal, export maternal and export terminal. Please visit www.specklepark.org/learn-breedplan to learn all about the new indexes and which one best suits your program.

Strong futures begin with healthy minds.

We're here to sell livestock. To feed passions, make memories, and create futures. Let's take a moment to acknowledge that none of that is possible without strong mental health.

Depression. Suicide. Pain. Loss. Bewilderment. Hopelessness.

Poor mental health affects more of us in the grandstands today than we can imagine. Its impact on society is monumental and it is claiming some of society's best. It took my Mum when I was 17 and has impacted me hugely. The Black Dog Institute is a fantastic initiative that is dedicated to understanding, preventing and treating mental illness. I have selected my favourite bull in this sale catalogue – chosen for no particular reason other than him being my favourite – and we will donate 10% of the auction sale price of this bull to the Black Dog Institute. Please, don't suffer in silence.

The selection from this catalogue is **Lot 5: JAD Vedette V287**.

THE LOCATION

Getting to the Sale

Sale Location:

Rolleston Livestock & Grain Selling Complex
Dip Road
Rolleston, QLD

Driving Directions:

Type "Rolleston Livestock and Grain Pty Ltd" as your destination in Google Maps.

Transport

The sale location is approximately 90 minutes drive (133km) from the Emerald Airport. Due to the uncertainty around flight times, we recommend you carry out your own research into current flight arrangements into Emerald.

Accommodation

There are a number of Motels, Hotels and Caravan Parks in Emerald, which is 90 minutes north of Rolleston. Please book in advance to ensure you secure your accommodation, and feel free to reach out to Amy at (0427) 464 333 or jad@jadspecklepark.com.au for assistance. Below are some more local accommodation options to Rolleston, and an Injune option for people travelling up from further south.

Rolleston Caravan Park

Cnr Comet & Meteor Streets, Rolleston

TMP S61

Te Mooi Schwarzenager S61

We purchased Schwarzenager as the \$20,000 top-priced bull of the 2023 Te Mooi Sale. He combines top 3% intra muscular fat with top 4% eye muscle area - a rare combination. We have been super impressed with his first progeny.

JAD S50

JAD Sizzler S50

Sizzler was the \$55,000 top-priced bull of the 2023 JAD Sale. He is a short gestation (top 1%) bull with top 10% EBVs across growth and carcase traits. He sits in the top 5% for all four selection indexes in the breed.

JAD Q48

JAD Quistacat Q48

A fluent-moving sire, Quistacat's daughters here are doing a great job. Excellent structure and carcase characteristics. If you're breeding cattle to market beef to the consumer, you can't go past Quistacat progeny. Top 1% of the breed for scrotal size.

MAU P194

Maungahina Promise

We purchased Promise for a then-New Zealand record NZ\$35,000 in 2020. His progeny are super docile, with a little extra bone and length of body. His daughters are hard-working and fertile. He is out of the same cow as our co-owned NZ sire, Maungahina Nikko.

Vindicate V202 has been selected to kick off our 3rd annual JAD Queensland Sale, and he is the first of a run of Te Mooi Schwarzenager S61 sons to be offered in the catalogue.

We purchased Schwarzenager S61 as the \$20,000 top-priced bull of the 2023 Te Mooi Speckle Park Sale, selected to improve eye muscle area (EMA) and carcass yield over our females who exhibit breed-leading fats. His first daughters have calved in the Autumn and we have been pleased with the job they are doing on their calves. Vindicate V202 is in the top 5% of the breed for both terminal indexes, and explosive growth.

We have been super impressed with the quality in our T-drop heifers' first calves, with Vapour V85 being the first to be offered in this catalogue.

Calving at a commercially-relevant two years old - or a touch before - our T-drop heifers did a great job on their first calves, and 100% re-bred for their second calf (71% to AI)! Vapour V85 is sired by the \$55,000 top-priced bull of the 2023 JAD Sale, Sizzler S50. In that same year, both Sizzler and his maternal grandam, Ultra N63, were selected by United States Master Breeder, Jeff Ward, for their genetics to go to the United Arab Emirates.

Another eye-catching bull in the catalogue, Victorious V98 was twin-born (28kg) out of a two-year-old heifer. He sits in the top 1% of the breed for scrotal size.

Victorious V98 is yet another larger-framed, long-bodied bull, with a good skin type. He is the only Matakana Rush Hour son to be offered in the catalogue. Rush Hour's progeny are born easy with accelerated growth and excellent carcass traits. After being so impressed by Rush Hour progeny in our 2024-drop, we once again used him as an AI sire for our 2025 heifer joining.

Validation V232 is the first of five sons of Waratah Amy Q88 to be offered in the catalogue, with three full ET-bred brothers to be offered at lots 7, 11 and 12.

Validation V232 is the larger-framed of the brothers, sitting in the top 10% of the breed for all growth traits. He sits in the top 10-15% of the breed for all four selection indexes. A very well-balanced bull, with a dark skin pigment. Validation V232 is also a very docile bull.

Vedette V287 is one of Justin's favourite bulls in the catalogue. He is very free-moving with a beautiful shoulder placement. A heavy-muscled bull with very good scrotal - top 1% of the breed for this trait. He combines muscle, power and softness as well as any bull in the catalogue.

Vedette V287 has a pedigree deep with proven genetics. He is sired by New Zealand sire, Maungahina Northern Star, who we have used heavily in our stud to date. His dam, Amy K52, is a full ET-bred sister to the well-known donor cow in the breed, Mount Eccles Queen Alone.

If you're looking for a combination of structural integrity and proven genetics, look no further than Vertical Limit V208.

Vertical Limit V208 is bred out of a full sister to our sire, JAD Sunday Silence S27 - the sire of lots 32, 33 and 39. They go back to Midnight Lady P23, who remains as one of Justin's favourite cows in our herd. P23 has bred very well us, with many sale high sellers, including a \$45,000 bull sold to Western Australia in our 2022 JAD Sale. Vertical Limit V208 sits in the top 2% of the breed for scrotal size, and top 7% for intra muscular fat (IMF).

Voltaire V263 is the second of five sons of Waratah Amy Q88 to be offered in the catalogue, with three full ET-bred brothers to be offered at lots 4, 11 and 12.

Voltaire V263 is a short gestation, low birthweight bull, suitable for use over heifers. He sits in the top 5-25% of the breed for all four selection indexes. A very well-balanced bull, with a dark skin pigment. His sire, JAD Sizzler S50, was the \$55,000 top-priced bull of the 2023 JAD Autumn Sale.

Vector V211 descends from our high-milking Niome cow family, which is known for producing females with outstanding udder set-up, and great dams overall.

Vector V211 is sired by Te Mooi Schwarzenager S61, who we purchased as the \$20,000 top-priced bull of the 2023 Te Mooi Speckle Park Sale in Victoria. He was selected to improve eye muscle area (EMA), and we have been really impressed with his progeny born here. Vector V211 is a bull with great volume, with a little extra bone and a very placid temperament.

Voracious V220 is the first of two sons in the catalogue by Maungahina Promise, who we purchased from New Zealand's Maungahina Stud in 2020 for a then NZ record of NZ\$35,000. The second son will be offered as lot 14.

Promise has consistently bred docile progeny with very good structure, extra length and capacity - very well-suited to the northern environment. His daughters are shaping up as functional, hard-working cows. We purchased Voracious V220's dam, Elite 03D, and two other proven mature females at the 2022 Silver Tip Speckle Park Herd Dispersal Sale in Canada.

A larger-framed bull, Vibrant V261 is the first son of JAD Quistacat Q48 to be offered in the catalogue. Quistacat has proven himself to produce early-maturing, soft carcass cattle, with very well-balanced structure. He has left many highly functional daughters in our herd.

Vibrant V261 is a chip off the old block. He is one of many bulls in the catalogue that Dick Whale scored a 7 out of 8 for structure. Vibrant V261 moves like a cat - just like his sire. He will cover country with ease as he goes about his new role.

Vigilante V303 is the third of five sons of Waratah Amy Q88 to be offered in the catalogue, with three full ET-bred brothers to be offered at lots 4, 7 and 12.

Vigilante V303 is a well-balanced, slick-coated bull who sits in the top 10-15% of the breed for maternal indexes. He is bred out of a really functional, no-fuss cow in Waratah Amy Q88, who has a great udder and is super quiet too. She joins up at the beginning of the joining window each year - a cow we all wish we had a herd of.

The first son of JAD Tombstone T184, to be offered at sale by JAD - the first of many to come in the future. Tombstone was selected not only for his incredible phenotype and docility by also the longevity of the cow family he hails from in New Zealand.

To top it off, Tombstone was the highest ranking bull from a cohort of 25 bulls tested in our 2023 University of Newcastle meat research. Vintage V351 is the youngest bull in this section of the catalogue, but mixes it with the top-end for performance. He sits in the top 10% of the breed for the Export Maternal Index.

Another son of Maungahina Promise, but this time out of one of our females in Canada, JSF Miss Sage 62F. Veteran V240 is a typical Promise type - he exhibits plenty of length, a little later maturity pattern, and he is very quiet.

Veteran V240 is a a Leptin TT bull that sits in the top 10% for scrotal size. He sits in the top 20% of the breed for the Export Maternal Index. We purchased his dam, JSF Miss Sage 62F in Canada in 2019, and she is still going strong. She has produced multiple high-selling progeny in previous JAD sales.

If you are chasing intra muscular fat, Vincenzo V332 would be a solid option, sitting in the top 1% of the breed for this trait. He also sits in the top 5-10% of the breed for both maternal indexes.

Vincenzo V332's dam, Miss Jennie R94, is a popular donor dam in our herd. Her four full ET-brothers highlighted our 2022 JAD Autumn Sale, when they sold to average \$37,500 and top at \$48,000. This cow was the only female produced from the flush.

Vangelis V67 is a sleep-easy calving bull, sitting in the top 3% of the breed for birthweight, and top 20% for gestation length.

Vangelis V67 is a moderate-framed Quistacat son out of a Codiak Acres Niome 5X daughter. Good footed and easy keeping, this bull is bound to breed longevity into his progeny. His dam, Niome N56 was a 2017-drop donor in our herd, and sold to Te Mooi Speckle Park at the JAD Accelerate Female Sale in 2023. She is one of the best-uddered Speckle Park cows we have bred.

This bull may be six months younger than the previous lot, but packs a punch, with loads of muscle and softness. His dam, Spanish Angel P241, is one of our top breeding females. An extremely docile young bull with exceptional balance, and a lovely sire's head, with hooded eye.

Purchaser:

Price: \$

We are excited to continue the development of our Commercial JAD Speckle Park Family. The proof is on display!

This family has been developed alongside our registered purebred family, and offers commercial producers an option for their breeding program to select unregistered commercial Speckle Park bulls that are DNA parent verified and tested for genetic conditions, independently structurally assessed, and backed by the 12-month JAD Guarantee. Some bulls in the following pages are just as "purebred" (PB) as those in the registered section, but just don't carry the registration paperwork.

This family's core foundation breeders were meticulously selected from over 400 F1 Speckle Park/Te Mania Angus

females, and we have benchmarked this herd directly alongside our registered cattle as they progress towards full-blood (but unregistrable) status. We look forward to following the progress. Please note that these unregistered commercial bulls have been managed in the same contemporary group as their purebred registered counterparts earlier in this catalogue.

NOTE:

75:25 = 75% Speckle Park, 25% Angus (AKA: F2)

88:12 = 87.5% Speckle Park, 12.5% Angus (AKA: F3)

94:6 = 93.8% Speckle Park, 6.2% Angus (AKA: F4)

Winter W6 will mature into a large-framed, mobile bull. He is a heifer's first calf - though you wouldn't know, as he is right at the top of his group performance.

Winter W6 sits in the top 7-15% of the breed for growth traits, top 1% for scrotal, and top 20% for retail beef yield. His sire, Sunday Silence S27, is well travelled, having sold to a QLD client at our 2023 JAD Autumn Sale. He then returned to his birthplace at Yeoval following a property sale and retirement, where he has gone on to breed very well for us. There will be quite a few sons offered at upcoming JAD Sales.

Another of Justin's favourites in the catalogue, Woodrow W5 was late to be registered, so his EBV data will be published in the supplementary sheet. Printed here are the mid-parent EBV percentiles for this mating.

Woodrow W5 is AI-bred out of one of our leading donor dams, Fancy Free S13, whose dam, Fancy Free N66, is another of the best performing dams in our herd - this bull is bred in the purple! Woodrow W5 is an eye-catching young bull with exceptional muscle expression, depth of flank, and softness!

Warrior Ace W25 is an AI-bred son of our exciting sire, The Marshall T87, who sits in the top 1% of the breed for all three fat EBVs.

Warrior Ace W25 is a very well-structured, moderate, heifer bull option. His dam, Miss Jennie R94, is a popular donor dam in our herd. Her four full ET-brothers highlighted our 2022 JAD Autumn Sale, when they sold to average \$37,500 and top at \$48,000. This cow was the only female produced from the flush.

Warialda W10 is an AI-bred son of the same cow that bred the sire of several other Autumn-drop bulls in this catalogue, Sunday Silence S27.

Warialda W10 is a typical Te Mooi Schwarzenager S61 type with a strong head, excellent muscle pattern, and bone. The Midnight Lady cow family hails from the Spots A Roarin cow family - with Midnight Lady 2C being a direct daughter of Ponderosa Spots A Roaring 19Y - and these two cow families have had a very strong influence throughout our herd.

Witch Craft W20 is another well-balanced son of Te Mooi Schwarzenager S61, this time out of one of our young S-drop Waratah-bred stud females, in Waratah Amy S28.

Witch Craft W20 sits in the top 7% of the breed for intra muscular fat (IMF), and top 20% for eye muscle area (EMA) - a rare combination.

The last of the Sunday Silence S27 sons to be offered in the catalogue, Winston W1 is a short gestation, low birthweight option, backed up with strong indexes.

Winston W1 was born 17 days before AI due date, at 30kg, making him the first stud calf born at JAD in 2025. He's made it all the way through our various checks and balances to earn a spot in the catalogue, and he presents as a "sleep-easy calving" option.

The final Speckle Park bull to be offered, and a strong way to finish!

Waylon W34 packs a punch, with top 2-6% growth, excellent carcase EBVs, and he sits in the top 10% of the breed for the Export Terminal Index. He goes back to one of the good ones in JAD 58Y Unique N4 - the dam of the highest selling heifer ever sold by JAD (\$40,000 in 2022). Unique N4 still holds her own among our herd to this day.

HBR-REGISTERED ANGUS BULLS

Understanding the TransTasman Angus Cattle Evaluation (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20

kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVs)

Calving Ease/Birth	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
	RBY	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate a lower score.
	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate a lower score.
	Leg Angle	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).	Lower EBVs indicate a lower score.
Selection Index	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	\$A-L	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems. The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Selection Indexes	\$D	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade. Steers are either finished using pasture, pasture supplemented by grain, or grain (e.g. 50 -70 days) with steers assumed to be slaughtered at 510kg live weight (280kg carcase weight with 12mm P8 fat depth) at 16 months of age.	Higher selection indexes indicate greater profitability.
	\$D-L	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade. Steers are either finished using pasture, pasture supplemented by grain, or grain (e.g. 50 -70 days) with steers assumed to be slaughtered at 510kg live weight (280kg carcase weight with 12mm P8 fat depth) at 16 months of age. The \$D-L index is similar to the \$D index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$D aims to maintain mature cow weight, the \$D-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
	\$GN	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 250 day feedlot finishing period for the grain fed high quality, highly marbled markets. Steers are assumed to be slaughtered at 800 kg live weight (455 kg carcase weight with 30 mm P8 fat depth) at 24 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate greater profitability.
	\$GN-L	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 250 day feedlot finishing period for the grain fed high quality, highly marbled markets. Steers are assumed to be slaughtered at 800 kg live weight (455 kg carcase weight with 30 mm P8 fat depth) at 24 months of age, with a significant premium for steers that exhibit superior marbling. The \$GN-L index is similar to the \$GN index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$GN aims to maintain mature cow weight, the \$GN-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
	\$GS	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers. Steers are assumed to be slaughtered at 650 kg live weight (350 kg carcase weight with 12 mm P8 fat depth) at 22 months of age. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements.	Higher selection indexes indicate greater profitability.
	\$GS-L	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers. Steers are assumed to be slaughtered at 650 kg live weight (350 kg carcase weight with 12 mm P8 fat depth) at 22 months of age. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements. The \$GS-L index is similar to the \$GS index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$GS aims to maintain mature cow weight, the \$GS-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
	\$PRO	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd based in New Zealand that targets the production of grass finished steers for the AngusPure programme. Steers are assumed marketed at approximately 530 kg live weight (290 kg carcase weight with 10 mm P8 fat depth) at 20 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate greater profitability.
	\$T	\$	Genetic difference between animals in net profitability per cow joined in a situation where Angus bulls are being used as a terminal sire over mature breeding females and all progeny, both male and female, are slaughtered. The Angus Terminal Sire Index focusses on increasing growth, carcase yield and eating quality. Daughters are not retained for breeding and therefore no emphasis is given to female fertility or maternal traits.	Higher selection indexes indicate greater profitability.

BHRP758

Dunoon Prime Minister P758

Dunoon Prime Minister P758 was the \$140,000 highest selling Angus bull of 2020. Renowned for his exceptional top-end performance, thickness, capacity, docility, and overall structural soundness. His first sons have been well-received.

NBHP392

Clunie Range Plantation P392

Described as Beast Mode's "best son", Plantation was a standout at Clunie Range as a calf, and he is backed by the dominant Naomi maternal line. He is in the top 5% of the breed for 200-day, top 6% for 400-day weight, and top 1% for scrotal size.

USA19251492

LT Converse 8011

LT Converse 8011 is a United States sire who has become highly proven for calving ease and maternal traits, improving udder attachment and teat size on daughters. Converse is also known for improving foot structure, fleshing ability, rib shape, and marbling ability.

USA18981191

Tehama Patriarch F028

Patriarch has become admired for his sound structure, foot quality, and excellent daughters. He sits in the top 1% of the breed for Calving Ease Direct, top 4% for Birthweight, and top 7% for 400-day weight.

Victor V669 is an ET-bred son of Millah Murrah Flower L290 - a very well-regarded cow family at Millah Murrah - and this bull has earned the task of kicking off our Angus section of the 3rd JAD Queensland Sale.

His sire, Banquet Quarter Pounder Q252, was the \$60,000 top-priced bull of the 2021 Autumn Banquet bull sale, selected for his excellent muscle expression, weight for age, heavy fleshing ability, and deep-bodied power that this sire exhibits.

We clearly think a fair bit about Van Dam V664 as in the lead-up to sale, he's been put to work, covering our Autumn stud AI females.

Van Dam V664 is dopey quiet, and features a real sire's outlook. He's a bull with a tonne of middle and mass to him, on a moderate frame. We love the depth of heel this bull has, and he is also bred for calving ease. Van Dam V664 is the second of three bulls in the catalogue out of Millah Murrah Flower L290, with maternal brothers at lots 41 and 44.

A full ET brother to the lot 42 bull, Dick Whale graded Vaughan V660 as a 7 out of 8 for structure/docility.

Vaughan V660 is a more moderate, thicker-set version of his brother, with both being sired by Dunoon Prime Minister P758, who was the \$140,000 highest selling Angus bull of 2020. Vaughan V660 is a well-balanced, sound, versatile bull.

Vitamin C V623 is the first of three sons to be offered sired by United States' sire, Tehama Patriarch F028, who has become admired for his sound structure, foot quality, and excellent daughters.

We purchased Bald Blair M151 following her impressive record within the Bald Blair stud at Guyra, NSW, where she was a donor dam, produced a bull retained at stud, and her more recent son was sold by Bald Blair stud for \$26,000. Vitamin C V623 is a short gestation, low birthweight bull, and he couples with with excellent growth and carcase weight EBVs.

Veteran V659 is the only bull in the catalogue sired by well-known United States sire, Sitz Resilient 10208, who was the record-setting \$165,000 bull of the fall 2019 Sitz Angus Ranch sale.

Veteran V659 is a long-bodied, docile bull, hailing from the Millah Murrah Prue cow family.

The final bull of the 2026 JAD QLD Bull Sale, and the only yearling Angus bull in the catalogue. Waylon W504 may be younger, but he is well worth a look.

Waylon W504 is a calving ease bull with plenty of carcass weight, sitting in the top 8% of the breed for birthweight, and 9% for the carcass weight EBV. His dam, Kenny's Creek Black Boom K303, is one of our foundation Angus stud cows, and she still remains in our herd today.
